Managed Services represent workstreams (2) Mobilize and (3) Implement of our **Utility Resource Management Framework**. Designed with industry best practices and executed with a continuous cycle of improvements, we will help you achieve your desired results.

Examples of program and project management services include:

- **Review** – Review and organize energy and utility systems, such as HVAC, plug loads, water, waste stream, etc. Update site and facility environmental review.
- **Evaluate** – Assess viability of individual resource conservation measures. Prioritize resource conservation measures based on your goals and needs.
- **Identify** – Technology selection and vendor selection that best implements conservation measures.
- **Research** – Assess and compile available financial incentive options, financing and funding options.
- **Implementation** – Manage vendors, apply for financial incentives, review status updates.
- **Communication** – Inform stakeholders, create educational programs and communication collateral.

We look forward to working together with you!
